

# COMPACT KEY CONTROL SYSTEM

The Security You Need. The Control You Want.

## WHY COMPACT KEY CONTROL SYSTEMS?

Compact Key Control System is a next-generation secured key control system designed to deliver unmatched protection, visibility, and operational control. Unlike traditional key cabinets that expose all keys when opened, the Compact Key Control System stores each key in its own sealed, electronically locked compartment—accessible only with proper authorization. With built-in video recording, real-time alerts, and advanced software controls, Compact Key Control System gives organizations complete oversight of key usage while simplifying daily operations.

## A NEW GENERATION OF SECURE KEY CONTROL SYSTEMS

### KEY BENEFITS
