

**The power to
control!**

Limit access to specific item

Manage your inventory

Reduce object detection

Introduction

The MATRIX is the most advanced storing system which allows you to safely store, control and manage your inventory.

The MATRIX is a fully automated cabinet equipped with an access control system that provides you with the power to decide who will gain access to the system.

Due to its unique design, the MATRIX is the only system that enables you to fit the size of the storage compartment to the stored item for maximum capacity utilization.

How does it work (issuing stored item)

Identification process

The system and drawers are normally locked. After identification process, the system will allow or deny access.

Selecting stored item

The user chooses a stored item directly from the integrated touch screen system.

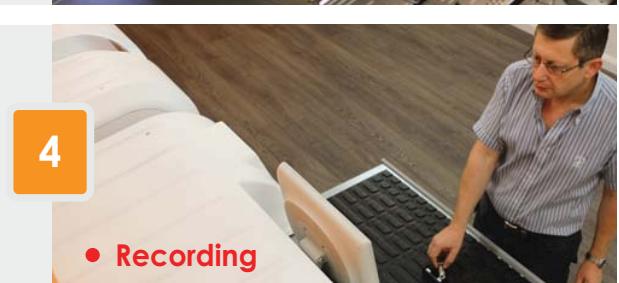

Issuing the item

Only the specific drawer and bin of the selected stored item will open automatically without any ability to access other stored items.

Process documentation

The entire issuing process is monitored and captured by external camera for maximum security.

Models

ULTRA

Floor standing units

Master

Slave

Up to 12 drawers

COMPACT

Desktop unit (with or without trolley)

Master

Slave

Up to 5 drawers

Connect endless slave units to one master cabinet

Unlimited storage capacity

Design your own system

Use our unique software to easily design the configuration that best suits your needs
Bins | Drawers | Cabinet

Maximum Flexibility

Any combination is possible

Design your own drawer by selecting any combination of bin sizes for utilizing maximum capacity

Example of bins combination

No minimum drawers per cabinet

The drawers are modular enabling the user to choose between any combination of three drawer depths

Buy what you need and order more as you grow

Specifications

Security camera

External software-controlled wireless security camera captures every transaction

Integrated Touchscreen

Massive Steel Structure

TCP/IP connection

Enables system operation from a remote computer

Identification System

Access to the system is only allowed after passing the identification process.

There are 4 types of access hardware to choose from:

- Fingerprint
- Proximity card
- Magnetic card
- Barcode

RFID tag reader

A wide range of storage compartments

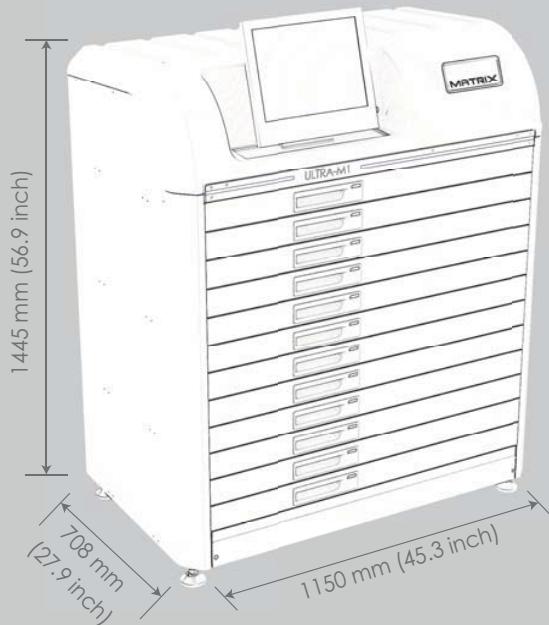

Each drawer contains a sealed compartment for a safe item storage

The bin opening system is a worldwide patent that enables the user to design any combination of bin sizes to maximize storage capacity
