

Open cases and inspect parts.

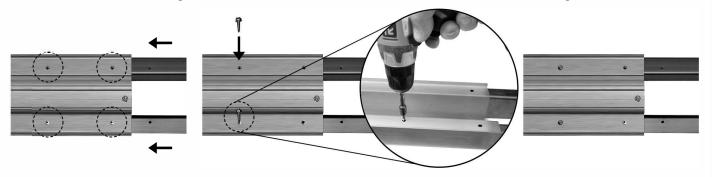

1 Lay the track upside down and set both pieces side by side.

2 Insert the cover screw and nut as shown in picture, tighten. Then turn track upside down exposing the 4 hole pattern. Do this on both tracks, only on the ends to be joined together.

3 Insert two connector angles in the slots and line up the holes. Drill in two self tapping screws as shown.

4 Slide the second track onto the connector angles. Make sure the parts are on a flat surface and that they fit tightly together. Then drill in two self tapping screws on the opposite end. When all four outside screws are secure drill in the 4 center screws.
