ProGuard DXB 100 ARC-PCO Replacement Cell

Product Identification

Product	ProGuard DXB 100 ARC-PCO Replacement Cell
StoreMoreStore SKU	SMS-895-V171-1X5896
Manufacturer Part Number	1x5896

Technical Specifications

Warranty	2-Year Manufacturer's Limited Warranty
Availability	Ships in 1-3 business days
Assembly	Assembled; installation may be required
Product Weight	2 lbs
Quantity Included	1
Compatible Model	ProGuard DXB 100 1x5784
Replacement Interval	Annually
Component Type	ARC-PCO replacement cell

Product Overview

The ProGuard DXB 100 ARC-PCO Replacement Cell renews the active component used by the system to treat air and exposed surfaces. Inside the host unit, UV light and a photocatalytic catalyst work with ambient moisture and oxygen to create the sanitizing output distributed through the room. Replacing the cell annually helps the DXB 100 continue operating at its intended treatment level without replacing the complete system. This single replacement cell is made for ProGuard DXB 100 model 1x5784.

Installation into the existing unit is required, so confirm the model on the equipment label before ordering and include the change in the facility's yearly maintenance plan. Key Features: DXB 100 Compatibility: Model-specific replacement for ProGuard DXB 100 model 1x5784. ARC-PCO Component: Restores the system component responsible for producing active air and surface treatment. Annual Service Item: Designed to be replaced once each year to support consistent operation.

Single-Cell Package: Includes one replacement cell for one compatible unit. Planned Maintenance: Lets facilities renew the core treatment component during scheduled service. Using the correct cell and replacing it on schedule helps protect the investment in a DXB 100 system and supports dependable operation through the next service period.
