| Warranty             | 2-Year Manufacturer's Limited Warranty  |
| Availability         | Ships in 1-3 business days              |
| Assembly             | Assembled; installation may be required |
| Product Weight       | 2 lbs                                   |
| Quantity Included    | 1                                       |
| Compatible Model     | ProGuard DXB Mini 1x6452                |
| Replacement Interval | Annually                                |
| Component Type       | ARC-PCO replacement cell                |

## Product Overview

The ProGuard DXB Mini ARC-PCO Replacement Cell restores the active treatment component inside the compact DXB Mini system. Its UV light and photocatalytic catalyst work with moisture and oxygen in the surrounding air to create the output circulated through the treated area. An annual cell change helps the host unit maintain its designed air and surface treatment performance while extending the useful service of the complete system. This replacement is intended specifically for ProGuard DXB Mini model 1x6452.

Verify the equipment label before ordering, then install the new cell as part of the unit's yearly maintenance cycle. Key Features: Exact DXB Mini Fit: Designed for ProGuard DXB Mini model 1x6452. Renews Active Treatment: Replaces the ARC-PCO component used to generate the system's sanitizing output. Annual Replacement: Supports a predictable once-per-year service schedule. One Cell Included: Provides the required component for one compatible DXB Mini unit.

Serviceable Design: Allows the treatment component to be renewed without replacing the complete system. Adding the ARC-PCO cell to the annual maintenance plan helps facilities keep their DXB Mini ready for continuous use across cultivation, drying, or other controlled-environment applications.
