## Product Overview

This steel turnout locker gives fire stations and emergency response facilities a dedicated, full-height storage solution for turnout gear, helmets, boots, and personal equipment. At 18"W x 24"D x 78"H, it provides enough vertical clearance and depth to hang and store bulky protective gear without cramming or folding, keeping equipment ready for rapid deployment and

extending its service life by allowing proper air circulation and organized placement.

Built from 18-gauge welded steel with a powder-coated finish, this locker arrives fully assembled so installation is straightforward. Leveling glides allow the unit to sit stable on uneven floors, and 1-inch slotted uprights give flexibility for configuring interior accessories to match the specific storage needs of each user.

Turnout lockers like this one are typically arranged in rows along apparatus bay walls or in dedicated gear rooms, where each firefighter or crew member has an assigned bay for their personal protective equipment. The full 78" height accommodates hanging coats and pants on separate hooks while leaving room below for boots and above for helmets or bags. The 24" depth handles the bulk of modern turnout gear without the locker protruding excessively into the work aisle.

Because the unit ships assembled, facilities can place and level it quickly without requiring specialized installation labor beyond standard setup. Key Features: 18-Gauge Welded Steel Frame: Heavy-gauge construction provides a rigid, long-lasting enclosure that stands up to the demanding environment of a fire station or emergency facility. Full-Height 78" Design: Tall enough to hang turnout coats and pants at full length, keeping gear off the floor, properly aired, and ready for immediate use.

24" Depth for Bulky Gear: Generous depth accommodates the full profile of modern protective equipment, including boots, helmets, and protective accessories, without forcing items to be compressed or stacked unsafely. 1-Inch Slotted Uprights: Allow interior fittings and accessories to be positioned at the height that works best for each user's gear configuration.

Powder-Coated Finish: Available in a choice of standard paint colors, providing a clean, durable surface that resists chipping and corrosion in high-use environments. Leveling Glides Included: Adjustable glides compensate for uneven floors so the locker sits level and stable without shimming or modification.

This 18"W x 24"D x 78"H steel turnout locker is a practical, ready-to-install storage solution for fire stations, emergency services facilities, and any organization that needs organized, full-height gear storage. Its assembled construction, powder-coated finish, leveling glides, and slotted uprights make it a dependable choice for organized gear storage.
