Product Height	88.25"
Material	Solid Steel
Weight	107

Product Overview

Tactical teams need storage that keeps gear organized, protected, and ready to deploy at a moment's notice. This solid steel tactical gear locker stands 88.25" tall with a 24" W x 18" D footprint, giving officers a dedicated full-height locker designed specifically for the demands of SWAT and tactical unit equipment. The Starter configuration makes it a practical entry point for outfitting a locker room or ready room, whether you are equipping a single bay or planning a larger installation.

Built from solid steel construction, this locker is made to hold up in high-use public safety environments where durability is not optional. Its tall profile accommodates bulky tactical gear, long garments, and equipment that standard lockers simply cannot handle, keeping everything contained and accessible when it counts. This locker fits naturally into tactical ready rooms, armories, and law enforcement equipment bays where organized gear storage directly supports faster response times.

The Starter designation identifies this as the base unit in a configurable locker system, making it the right choice when you need a standalone solution or when you are beginning a phased installation. Its solid steel body resists the wear of daily use in demanding environments, and the full-height design means officers can store complete kit from helmet to boots without compromise.

Key Features: Full-Height Design: At 88.25" H, this locker accommodates complete tactical kit including long garments, helmets, and bulky equipment that shorter lockers cannot fit. Solid Steel Construction: Built from solid steel for lasting durability in high-use law enforcement and tactical environments. Practical Footprint: The 24" W x 18" D profile makes efficient use of floor space in ready rooms, armories, and equipment bays.

Starter Configuration: Serves as the base unit in a configurable locker system, suitable as a standalone solution or as the foundation for a larger installation. This tactical gear locker is a purpose-built storage solution for SWAT teams and tactical units that need reliable, full-height equipment storage in a solid steel package. The Starter configuration provides a straightforward path to organized, secure gear storage in any public safety facility.
