Technical Specifications

Product Width	24"
Product Depth	18"
Warranty	Manufacturers Limited Lifetime Warranty
Product Height	88.25"
Material	Solid Steel
Weight	65

Product Overview

This solid steel tactical gear locker gives SWAT teams, law enforcement units, and public safety personnel a dedicated, full-height storage solution for bulky gear, equipment, and personal items. At 24" W x 18" D x 88.25" H, it provides a tall, organized compartment that keeps gear off the floor, ready for rapid deployment, and secured in a consistent location.

As an adder unit, this locker is designed to expand an existing locker run, connecting to a starter or base unit to build out a larger gear storage system without duplicating shared side panels. This makes it a practical choice for outfitting a full team bay or locker room where multiple officers need individual storage in a compact, efficient footprint. The adder configuration is ideal for facilities planning a phased rollout or expanding an existing installation.

The solid steel construction supports the demands of a working tactical environment, where lockers must hold up to daily use, heavy gear loads, and the wear of an active public safety setting. The full 88.25" height maximizes vertical storage space, accommodating long garments, body armor, helmets, and other oversized equipment that standard lockers cannot handle effectively.

Key Features: Full-Height Design: At 88.25" H, the locker accommodates long tactical garments, body armor, helmets, and other oversized gear that requires vertical clearance. Solid Steel Construction: Built from solid steel for durability in demanding law enforcement and public safety environments. Adder Unit Configuration: Designed to connect to an existing starter unit, allowing facilities to expand their locker system efficiently without redundant side panels.

24" W x 18" D Footprint: Provides a generous individual storage compartment while maintaining a manageable depth for locker room and bay installations. This solid steel tactical gear locker adder unit is a practical choice for law enforcement and public safety facilities that need to expand organized, full-height gear storage for their teams. Its adder design integrates cleanly with a compatible starter unit to build a complete, space-efficient locker run suited to the demands of an active tactical environment.
