## Product Overview

This solid steel gear locker is built for SWAT teams and tactical law enforcement units that need secure, dedicated storage for duty gear, equipment, and personal items. At 30" W x 18" D x 88.25" H, it provides a full-height storage column that keeps gear organized, protected, and ready for rapid deployment. This is an Adder unit, designed to extend an existing locker run rather than stand alone.

Adding an Adder to a starter configuration lets a department grow storage capacity in a consistent, space-efficient line without duplicating end panels, keeping the overall footprint tight in locker rooms where every square foot counts. The 30" width gives each user a generous individual bay suited to bulky tactical gear, while the 18" depth keeps the unit from projecting too far into the room.

The full 88.25" height maximizes vertical storage in the same floor space, making this locker a practical fit for armories, precinct locker rooms, and tactical operations facilities. Solid steel construction supports the durability demands of a high-use public safety environment. Key Features: Adder Configuration: Designed to attach to an existing locker run, expanding capacity without redundant end panels and keeping the installation footprint efficient.

Full-Height Design: At 88.25" H, the locker maximizes vertical storage space so bulky tactical gear, helmets, and equipment can be stored in a single organized bay. Generous 30" Width: Wider than a standard locker bay, giving each user enough room to hang and store full tactical loadouts without cramping gear. Solid Steel Construction: Built from solid steel to withstand the daily demands of a high-use law enforcement or public safety environment.

18" Depth: A practical depth that keeps the unit from projecting excessively into the room, supporting efficient use of locker room floor space. This 30" W x 18" D x 88.25" H solid steel Adder locker is a purpose-built solution for expanding tactical gear storage in law enforcement and public safety facilities. Its full-height, wide-bay design keeps duty gear organized and

accessible while the Adder format allows departments to scale storage capacity in a clean, consistent locker line.
