Technical Specifications

Product Width	36"
Product Depth	18"
Warranty	Manufacturers Limited Lifetime Warranty
Product Height	88.25"
Material	Solid Steel
Weight	137

Product Overview

When tactical teams need a reliable, dedicated place to store gear between deployments, this solid steel SWAT gear locker delivers a full-height storage solution built for demanding public safety environments. At 36" W x 18" D x 88.25" H, the starter unit provides a substantial footprint for organizing body armor, helmets, uniforms, and other mission-critical equipment in one secure location.

The solid steel construction keeps gear protected and contained, reducing the time officers spend locating and staging equipment before a call. A starter configuration makes it straightforward to establish an organized locker room or ready room without overcommitting floor space from the outset. This locker is well suited for police department ready rooms, SWAT staging areas, sheriff's offices, and other law enforcement or public safety facilities where personnel need consistent, assigned storage for tactical gear.

The full-height 88.25" profile maximizes vertical space, allowing longer items such as rifle cases or gear bags to be stored upright. As storage needs grow, a starter unit can anchor a larger locker bank when add-on units are incorporated into the layout. Key Features: Solid Steel Construction: Built from solid steel for durability in high-use public safety environments, protecting gear from damage and unauthorized access.

Full-Height Profile: At 88.25" H, the locker accommodates tall or bulky tactical items such as gear bags, rifle cases, and body armor carriers stored upright. Generous Width: The 36" width provides ample compartment space for a full set of tactical gear, reducing clutter and keeping equipment organized by user. Starter Configuration: Designed as the beginning unit of a locker run, making it practical to start with a single station and expand the installation as staffing or storage needs increase.

18" Depth: The 18" depth keeps the locker footprint manageable in corridors and ready rooms while still accommodating bulky protective equipment. This solid steel SWAT gear locker is a practical choice for law enforcement and public safety facilities that

need organized, full-height storage for tactical equipment. The starter unit establishes a clean, functional storage station that supports team readiness and keeps gear accounted for and ready to go.
