Technical Specifications

Product Width	30"
Product Depth	24"
Warranty	Manufacturers Limited Lifetime Warranty
Product Height	88.25"
Material	Solid Steel
Weight	148

Product Overview

Tactical teams need storage that keeps gear organized, protected, and ready to deploy at a moment's notice. This solid steel gear locker is built for SWAT and public safety environments where reliable, heavy-duty storage is a daily operational requirement. At 30" W x 24" D x 88.25" H, the starter unit provides a full-height footprint that accommodates bulky tactical equipment while keeping the storage area orderly and secure.

The solid steel construction delivers the structural integrity that demanding public safety applications require, standing up to the wear of shift-after-shift use in armories, equipment rooms, and locker areas. This starter locker is the foundational unit in a tactical gear storage system, making it the right choice when outfitting a new space or expanding an existing storage layout one section at a time.

Its full-height profile maximizes vertical storage capacity within a defined floor area, helping facilities store more gear without consuming additional square footage. The 24" depth accommodates larger items such as vests, helmets, and long-format equipment that standard lockers cannot handle. Facilities planners and quartermaster staff will find the starter configuration a practical starting point for building out a complete gear-management solution.

Key Features: Solid Steel Construction: Built from solid steel for the durability and structural strength that high-use public safety environments demand. Full-Height Profile: At 88.25" tall, the locker maximizes vertical storage space, keeping gear off the floor and within easy reach. Generous Depth: The 24" depth accommodates bulky tactical items such as body armor, helmets, and other large-format gear that standard lockers cannot fit.

30" Width: A 30" wide footprint provides meaningful per-user or per-unit storage capacity while allowing efficient row planning in equipment rooms. **Starter Configuration:** Designed as the base unit for a modular gear storage system, supporting phased buildouts as team size or storage needs grow. This solid steel tactical gear locker is a practical, heavy-duty storage solution for

SWAT teams, law enforcement units, and public safety facilities that need organized, secure, and accessible equipment storage.

The starter unit establishes the foundation of a well-planned gear room, with dimensions suited to full-size tactical equipment and a construction quality built to last through years of operational use.
