Technical Specifications

Product Width	30"
Product Depth	30"
Warranty	Manufacturers Limited Lifetime Warranty
Product Height	88.25"
Material	Solid Steel
Weight	168

Product Overview

This solid steel SWAT team gear locker is built for law enforcement and public safety teams that need secure, organized storage for tactical equipment. At 30" W x 30" D x 88.25" H, it provides a full-height footprint sized to accommodate bulky gear, keeping equipment protected, accessible, and off the floor between deployments.

This listing is for the adder unit configuration, which is designed to join an existing locker run and expand storage capacity without requiring a freestanding end panel on every unit, making it a practical choice when outfitting a locker room or ready room with multiple stations. The adder unit pairs with a starter unit to form a complete locker bay. Its 30" depth accommodates gear that standard-depth lockers cannot, and the solid steel construction supports the demands of a high-use public safety environment.

This configuration is well suited for SWAT, tactical response, and similar units that need dedicated, individual storage for helmets, body armor, duty bags, and related equipment. Key Features: Full-Height Design: At 88.25" tall, this locker provides generous vertical storage space for long gear items and layered equipment organization. Deep 30" Footprint: The 30" W x 30" D footprint accommodates bulky tactical gear that shallower lockers cannot fit, reducing the need for supplemental storage.

Solid Steel Construction: Built from solid steel for durability in demanding public safety and law enforcement environments. Adder Unit Configuration: Designed to connect to a starter unit, allowing locker runs to be expanded efficiently while maintaining a clean, uniform appearance. Manufacturer's Limited Lifetime Warranty: Backed by a manufacturer's limited lifetime warranty for long-term confidence in the investment.

This solid steel SWAT gear locker adder unit is a practical solution for agencies equipping tactical team ready rooms or locker areas where deep, full-height individual storage is required. Its adder configuration makes it straightforward to scale storage capacity as team size or equipment needs grow.
