Technical Specifications

Product Width	36"
Product Depth	30"
Warranty	Manufacturers Limited Lifetime Warranty
Product Height	88.25"
Material	Solid Steel
Weight	192

Product Overview

This solid steel SWAT team gear locker gives law enforcement and tactical teams a dedicated, secure place to store and organize bulky equipment, keeping gear ready and accounted for between deployments. At 36" W x 30" D x 88.25" H, the locker provides full-height storage capacity suited to long rifles, body armor, helmets, and other large tactical items that standard lockers cannot accommodate.

The adder unit configuration is designed to join an existing starter or base locker run, allowing departments to expand storage capacity as team size grows without sacrificing floor space efficiency. Solid steel construction supports the demanding conditions of an armory, equipment room, or locker bay where durability and long-term reliability are essential.

SWAT and tactical gear lockers like this one are typically installed in secure equipment rooms, armories, or dedicated locker bays where officers can store and retrieve personal protective equipment, weapons, and mission-critical gear. The adder format means this unit shares a common wall with an adjacent locker, creating a clean, space-efficient row that is easier to manage and secure than freestanding cabinets.

Departments planning a new installation or expanding an existing one can add this unit to a compatible locker run to match current and future staffing needs. Key Features: Full-Height Storage: At 88.25" tall, the locker accommodates long tactical items such as rifles, body armor, and helmets that require more vertical clearance than standard lockers provide. Solid Steel Construction: Built from solid steel for lasting durability in high-use armory and equipment room environments.

Generous Footprint: The 36" W x 30" D footprint provides ample interior space for bulky gear while keeping the unit organized within a structured locker row. Adder Unit Design: Configured to attach to an existing locker run, making it straightforward to expand storage capacity as team size or equipment needs increase. This solid steel SWAT gear locker is a practical solution for tactical teams that need reliable, full-height storage for large and heavy equipment.

The adder configuration supports scalable installations, letting facilities grow their locker capacity in a consistent, space-efficient layout.
